

## Take-A-Number Paging Systems

This system is used in applications where there is a need to organize waiting customers. Simple push buttons can be pressed by each clerk, which will advance the number on the display to page the next person in line (a second button can be attached for countdown purposes). The new Remote Control can be used in conjunction with or instead of the wired push buttons to advance and decrement the display. In addition, the remote can be used to quick set the display and to change all of the programmable options. The displays include a chime, which sounds each time the display is incremented or decremented. This chime may be enabled or disabled by the operator.

The SC-5400 Take-A-Number displays are available with 2 or 3 digits, displaying 5.5" tall LED characters visible up to 125 feet. They are powered by a plug-in 24 volt power adapter. The display cases have dark red Plexiglas faceplates and scratch-resistant black anodized extrusion cases.

### Applications

- Social Security offices
- Tax preparation facilities
- Court clerk lines
- Post offices
- Fast-food restaurants
- Bakeries and Delicatessens
- Retail stores and offices
- Printing and copy shops
- Government agencies

### Remote Control Option

The 5400 displays can be controlled with a TV-style remote control. This allows you to completely set up and control every function of the display with the remote. All functions, including increment, decrement, number preset, clear, and set up programming are easily done up to 30 feet away from the display. This handheld remote works like your TV remote, just point and click. The remote must be in front of the display to operate successfully and the display must be visible from the remote, not behind a wall or in another room.

### System Options (Please call for more information)

- **Sunlight Brightness LEDs** - This option allows the displays to be used in high ambient light conditions, such as television studios or outdoors in direct sunlight.
- **External Doorbell** - The external doorbell can be connected to the above AC driver circuit. The doorbell will sound every time a new number appears on the display or when a counter reaches zero. This doorbell is very similar to one you would find in a typical hardware store.
- **Optional Ceiling Mounts** - single, double, and triple-sided ceiling mounts are available. These come with clips to attach to an ordinary T-Bar drop ceiling.
