

Model 5400 Stand-Alone Clock, Timer or Counter

The SenSource Model 5400 Display is a Multifunction Display. It can be programmed to function as a Stand-Alone Clock, Count-Down/Count-Up Timer or Counter and controlled with remote pushbuttons or a wireless remote control to start/stop or increment the display. Multiple displays can be networked together to display the same number. It comes in a black extruded aluminum case with a dark red Plexiglas faceplate. The displays have large 5.5" tall numbers that are easily visible up to 125 feet and are designed to hang on a single screw like a picture frame. The display is powered with 24V AC or DC (Power Adapter is included).

Remote Control Option (recommended for use with the display)

A hand held remote control similar to a TV remote can be used in conjunction with or instead of the wired push buttons to start or stop advance and decrement the display. In addition, the remote can be used to quick set the display and to change all of the programmable options.

Stand-Alone Clock

SenSource carries two Stand-Alone Time-of-Day Clocks: a 4- and a 6-Digit Clock. Each clock can be set with two buttons. One button sets the minutes and the other button sets the hours. The seconds are reset to zero each time either button is pushed. On the 4-Digit Display, only hours and minutes are visible. On the 6-Digit Display hours, minutes, and seconds are visible.

Stand-Alone Count-down or Count-up Timer

The 5400 Series Display can be purchased in 2-, 3-, 4-, or 6-digit models. The displays can be set by the user to any time and begin counting up or down with the press of an external button. The 5400 series displays have been designed with flexibility in mind. Some of the user adjustable settings include Input button logic, Start and Stop time, Count down/up, auxiliary output time, and colon flash rate among others.

Count-Up Counter

The 5400 Series Display can be used as a simple counter that will increment or decrement the number on the display with a push of a momentary button. One button will increment the display (counting up) while the other will decrement the display (counting down). The wireless hand held display may also be used to perform the same functions. The counter can function in a variety of applications including production counters, part counters, event counters, now-serving sign and take-a-number systems.

Networking Signs – Multiple Signs can be connected together so all will display the same number in a “Master-Slave” configuration.

Available Models (hand held remote control is available for all versions)

DIGITS	MODEL NUMBER	Remote Control (Optional)
2-Digit Display	Model SC-5420	SC-A5400-3100
